ALMIR SARAJČIĆ

Software consultant | Elixir, Phoenix & agentic development | Building Kogen

Kenya (UTC+3) · Remote consulting

consulting@optimum.ba · almirsarajcic.com · GitHub · LinkedIn

I help teams build and improve software, specializing in Elixir, Phoenix and agentic development. I'm also building Kogen. I've worked in software since 2012 and on professional Elixir projects since 2017.

I use coding agents to deliver software, taking responsibility for technical decisions, verification and the final result. My experience spans product and project management, code review, mentoring and taking products from proof of concept into production.

EXPERIENCE

Founder & Software Consultant - Optimum

Remote · 2022 - Present

Provide software consulting through Optimum Tech and build Kogen. Previously ran Optimum BH, an Elixir and Phoenix agency, overseeing client delivery, product and project management, technical direction and team development.

Kogen - Software-building system

2025 - Present

kogen.dev

– Developing Kogen, a software-building system designed to carry a shaped feature through implementation, checks, independent review and rework. The product remains in development.

– Designed workflows that connect product and UX decisions with implementation: define the feature and its boundaries, check the resulting code, and review it before acceptance.

– Evaluated Claude Code, OpenAI Codex and Cursor Agent on repository tasks, examining planning, orchestration, context limits, failure modes and independent acceptance.

Optimum BH - software development agency

Jan 2022 - Jan 2026

– Ran the agency across client relationships, commercial work, project management, technical direction and team delivery.

– Led delivery and contributed engineering work on client Elixir/Phoenix applications and internal products.

– Led product and project management for internal applications, including ElixirDrops and Skeptic.bot, coordinating team delivery and reviewing implementation.

– Owned shared developer tooling and CI/CD: compilation, formatting, static analysis, dependency and security audits, migrations, tests, zero-downtime deployments and per-PR preview environments on Fly.io.

– Led development and release of Optimum Elixir tooling including github_workflows_generator, optimum_credo, phx.tools and optimum_templates. OptimumGenInfra automated infrastructure and CI/CD configuration; it is now archived and no longer sold.

– Mentored developers through code review and technical guidance. Wrote technical articles for the Optimum blog and guided teammates on article topics, themes and structure.

Co-founder & Lead Developer - StoryDeck

Remote · 2020 - 2024

– Built an Elixir/Phoenix proof of concept for Hikaya as a paid freelance engagement. Continued the product as StoryDeck, serving as co-founder and technical lead through MVP and production.

Independent Software Contractor

Remote · 2019 - Present

– Implemented WPA3 support for Nerves on Raspberry Pi 4 as part of a broader client engagement.

– Worked on GlobalReader, an IoT analytics platform for real-time production tracking, alongside other Elixir and Phoenix client engagements.

EARLIER SOFTWARE ROLES

– Backend Developer, Mukuru · 2016 - 2020 · Remote. Pan-African remittances fintech. Implemented features in a large PHP application using DDD and TDD; improved and modernised legacy code.

– Full-Stack Developer, Klika · Apr 2015 - Oct 2016 · Sarajevo. Outsourcing and consulting firm. Delivered client projects in Ruby on Rails and JavaScript.

– Full-Stack Developer, Social Eddy · Sep 2012 - Nov 2013 · Remote. Content marketing and social account management platform. PHP, MySQL, and JavaScript; third-party API integrations, analytics, and SQL query optimisation.

Experience across gaming, social media, real estate, finance, education and news. Elixir has been my primary language since 2020. Bosnian (native), English (fluent).

SELECTED WORK

Kogen Software-building system in development, designed around feature shaping, implementation, checks and independent review.

Kogen Bench Published experiments, methods and results on coding agents and software verification, with evidence limits and reproduction instructions.

ElixirDrops Publishing platform for Elixir and Phoenix developers, developed with the Optimum team. My work includes product direction, project management, reviews and technical writing.

Combobulate Earlier website-building product designed around Telegram conversations, deployment and domain setup; hosted service retired.

Skeptic.bot Podcast research assistant built in Elixir and Phoenix LiveView, with transcription, AI summarisation and search.

elixir.menu Independent guide to tools for Elixir applications: seven starting paths, a preferred Phoenix + LiveView web stack, and instructions for coding agents.

phx.tools Development-environment setup for Elixir and Phoenix on Linux and macOS.

github_workflows_generator Define GitHub Actions workflows in Elixir and generate YAML. Published on Hex.

optimum_credo Custom Credo checks for Elixir projects. Published on Hex.

Optimum Templates Phoenix generator templates that follow Optimum's Credo rules.

WRITING

ElixirDrops Author of 150+ published drops on Elixir, Phoenix and software development.

Stop mounting your LiveView twice Article on LiveView's double mount and an experimental resume approach in my LiveView fork. Featured first in ElixirWeekly #516.

Elixir DevOps series Six-part series on CI/CD for Elixir and Phoenix, covering GitHub Actions, release testing, preview environments, deployments and infrastructure generation.

SKILLS

Languages & frameworks Elixir, Phoenix, LiveView, Ecto, PETAL stack; JavaScript, PHP, Ruby on Rails

Product & delivery Product and project management, technical direction, implementation and verification, code review, mentoring and technical writing

Infrastructure & tooling GitHub Actions, Fly.io, Docker, PostgreSQL; CI/CD, preview environments, deployment automation, Credo, Dialyzer, dependency and security audits, test strategy

AI & development workflows AI feature integration; coding agents, feature shaping, orchestration, automated checks and independent review; Claude Code, OpenAI Codex, Cursor Agent

CONSULTING AND CONTACT

Consulting on Elixir and Phoenix applications, development workflows and faster feedback, and effective use of coding agents. Improve builds, tests, CI/CD, previews and review while keeping useful checks. Contact: consulting@optimum.ba.
